

COMPANY PROFILE

The key to the success of any project lies in the ability of a highly skilled team and proper implementation of resources. Since its founding in 1987 by Glenn Boornazian, **INTEGRATED CONSERVATION CONTRACTING, INC. (ICC)** has built and maintained a reputation as historic building specialists, with the craft and management expertise necessary to implement and/or review projects, and provide clients with the consistently high level of quality workmanship reflected in our international project portfolio.

Specifications and project planning for historic structures and materials are assessed from data collected through our documentation and testing processes. This, along with our collective scholarship and field experience and our own knowledge of real-world practical constraints, allows us to utilize accepted standards to their best application in the conservation field.

Glenn Boornazian brings credentials, experience, and vision to the field of architectural conservation. Recognizing the market for historic preservation services was highly fragmented, Glenn founded **ICC** and **INTEGRATED CONSERVATION RESOURCES, INC. (ICR)** both in 1987; the result being a fusion of investigative, architectural conservation services with accomplished conservation and restoration contracting.

FIRM QUALIFICATIONS:

- general contracting and constructions management
- master plans for long-term, phased restoration programs
- maintenance plans
- specialty mock-ups
- historic paint color schemes
- comprehensive conservation programs for interior and exterior materials
- restoration cost estimating
- conservation team management
- historic decorative finishes schemes
- paint removal and application
- methods and materials for: paint and stain removal, consolidation / waterproofing, casting mixes and fabrications, cleaning procedures, temporary and long-term stabilization of fragile materials and non-destructive evaluation
- masonry conservation: cleaning, dismantling and resetting, design of compatible patching, pointing, stabilization, carving and installation of new stone
- site supervision and quality control
